D1.4 results are integrated in D1.3.

D1.3 and D1.4 aimed at reporting the results obtained during the first phase of validation using the CANDELA platform and its analytics tools. Although the two project use cases were expected to be reported in different documents (D1.3 and D1.4), after the review meeting it was decided to produce only one report because this first validation round resulted to concentrate very much on generic functionalities of the platform, since it is not yet fully adapted to each use case.

As a result, this deliverable (D1.3) includes the validation reports of Use Case #1 and Use Case #2 (initially planned in D1.4).
